ABHAY KAMBLE

Full Stack Developer · Python · FastAPI · React.js · .NET Core · Azure

Pune, Maharashtra | +91 8888466144 | kabhay007@outlook.com | Portfolio | GitHub | LinkedIn

PROFESSIONAL SUMMARY

Full Stack Developer with 2+ years of experience delivering production-grade enterprise applications for US legal systems. Built and shipped 100+ REST API endpoints across enterprise projects, serving 10+ courts and 200+ interpreters with zero major downtime. Proficient in Python, FastAPI, React.js, ASP.NET Core, Azure Functions, and MS SQL Server. Architected a greenfield multi-domain workforce platform (courts + healthcare) from scratch and independently built an algorithmic trading platform. Leverages GitHub Copilot Pro for AI-assisted development to ship faster without compromising code quality. Currently expanding into AI/ML engineering through applied coursework and independent project work.

TECHNICAL SKILLS

Languages: Python, C#, JavaScript (ES6+), SQL
Backend Frameworks: FastAPI, Django, ASP.NET Core, ASP.NET MVC
Frontend: React.js (Vite, Hooks, Redux, React Router), Material UI, HTML5, CSS3, Bootstrap, jQuery
Cloud & Serverless: Microsoft Azure — App Services, Azure Functions (HTTP, Timer, Blob, EventHub triggers), Storage Accounts
Database: MS SQL Server, PostgreSQL, Stored Procedures, Query Optimization, ADO.NET, LINQ
Tools & Practices: Git, GitHub Copilot, Jira, WebSocket, RESTful APIs, Unit Testing, Agile / Scrum

WORK EXPERIENCE

SOFTWARE ENGINEER · AlongX Software · *May 2024 – September 2026*

NERAM.AI — Multi-Domain Workforce Management Platform (Python · FastAPI · React.js · Vite · MS SQL Server) *Dec 2025 – September 2026*

Greenfield platform unifying court and healthcare workforce management; supports dynamic role-based hiring for judges, clerks, and interpreters across multiple domains.

- Architected a scalable multi-domain platform **from scratch** using Python (FastAPI) and React.js (Vite), replacing 2 siloed court systems and extending capabilities to healthcare organisations.
- Designed and built **25+ RESTful APIs** in FastAPI, enabling role-based access for judges, clerks, and interpreters with clean separation of concerns across court and healthcare workflows.
- Developed **30+ reusable React components** using Hooks, Redux, and component-based architecture — reducing UI development time per new domain by ~40% through shared design patterns.
- Leveraged **GitHub Copilot Pro** throughout the build cycle, accelerating feature delivery while maintaining code consistency and quality across a rapidly expanding codebase.

Moli — Interpreter Management System (USA Courts) (ASP.NET Core · C# · Azure Functions · MS SQL Server · React.js) *March 2025 – Dec 2025*

Production system managing 200+ court interpreters across scheduling, session assignments, availability tracking, and multi-jurisdiction coordination.

- Built 20+ RESTful APIs in ASP.NET Core to manage scheduling, assignment, and availability tracking for **200+ active interpreters** across multiple US court jurisdictions.
- Designed **20+ database tables** and stored procedures in MS SQL Server, streamlining interpreter data retrieval and reducing manual coordination overhead across sessions.
- Deployed **5+ Azure Function Apps** (HTTP, Timer, Blob, EventHub triggers) to automate interpreter assignment workflows and session notifications, eliminating manual processing bottlenecks.
- Diagnosed and resolved 30+ production and QA-reported bugs through systematic root-cause analysis, directly improving post-release application stability across sprints.
- Collaborated with QA team to triage and close defects, contributing to a measurable reduction in regression issues and shortening release cycle times.

Moli Admin — Court Admin Web Application (Python · FastAPI · React.js · MS SQL Server) *March 2025 – Dec 2025*

Admin-level web application for internal management of the Moli interpreter platform — handling user management, configuration, reporting, and system-level operations.

- Built admin dashboard backend using **Python and FastAPI**, enabling secure admin-level CRUD operations across interpreter records, court sessions, and system configurations.
- Developed **React.js frontend** with role-protected admin views, giving operations teams a centralised interface to manage the full Moli interpreter lifecycle.

- Designed and implemented database schemas and stored procedures in MS SQL Server to support admin reporting, **audit logging**, and bulk data operations.
- Integrated admin APIs with the core Moli system, ensuring consistent data flow and avoiding duplication of business logic across both applications.

AI-Terp — Real-Time Video Calling with Multilingual Interpretation (React.js · Redux · WebSocket · Material UI) *Nov 2024 – March 2025*

Real-time video communication platform with AI-powered speech translation supporting 50+ languages for live court interpretation sessions.

- Built **10+ React components** for a production video calling platform, delivering a responsive and accessible UI for real-time multilingual court interpretation sessions.
- Integrated **WebSocket-based peer-to-peer** audio/video streaming, achieving reliable low-latency communication between court participants and remote interpreters.
- Collaborated on integrating bidirectional speech-to-text and text-to-speech AI models supporting **50+ languages**, enabling live interpretation for non-English-speaking court participants.
- Managed application state using Redux and built multi-screen navigation with React Router, ensuring a seamless user experience across the platform's core workflows.

Kulu — Juror Management System (USA Courts) (Python · Django · Azure Functions · MS SQL Server · React.js) *May 2024 – Nov 2024*

Enterprise court management system processing 1 lakh+ juror records, managing 200+ summons per event across 10+ US courts.

- Engineered **35+ RESTful APIs** in Django, powering end-to-end juror workflows for 10+ US courts managing 1 lakh+ juror records and 200+ summons per court event.
- Optimised 10+ existing SQL queries in MS SQL Server, significantly reducing data retrieval times under high-volume summons processing.
- Built and deployed **8 Azure Function Apps** across HTTP, Timer, Blob, and EventHub trigger types, automating critical court workflows and reducing manual processing dependencies.
- Delivered responsive UI modules using HTML5, CSS3, JavaScript, and jQuery, reducing court staff navigation time and improving daily operational usability.

PERSONAL PROJECTS

Three independent products built on a common FastAPI, database and React framework, each running separately with its own authentication, menus and permissions. Live demo links open a login page; demo credentials are shown there.

Sniper.ai — Algorithmic Trading Platform (Python · FastAPI · React.js · PostgreSQL) · *Demo available on request*

- Built an intraday index-options trading platform with a configurable rule-based strategy engine, real-time signal generation, backtesting and paper trading.
- Integrated broker order execution and live market data, with a React dashboard for monitoring signals, trades, and system state.

Sniper Assist — Customer Support System (Python · FastAPI · React.js · PostgreSQL) · sniper-assist.vercel.app

- Built a full-stack application where company staff log customer enquiries and complaints, generate tickets, track them through status changes, and close them out, with role-based access for internal teams.

Sniper Accounts — Fund Management System (Python · FastAPI · React.js · PostgreSQL) · sniper-accounts.vercel.app

- Built a full-stack application to manage funds: add funds, record expenses and generate reports, with its own authentication and permissions.

KEY ACHIEVEMENTS

- **100+ API Endpoints —** Delivered production REST APIs serving active US legal systems across enterprise projects with no major downtime incidents reported.
- **5 Projects in 2+ Years —** Contributed to 5 enterprise projects and designed a full-stack system of my own, spanning backend, frontend, cloud serverless, and greenfield platform development.
- **30+ Production Bugs Resolved —** Diagnosed and closed bugs across production and QA cycles, improving application stability and reducing regression rates.

EDUCATION

Post Graduate Diploma in Advanced Computing (CDAC) · CDAC, Noida · 2023

Bachelor of Engineering (B.E.) · Shivaji University, Maharashtra · 2019
